

Ag Loader Adaptor

The Kerfab Ag Loader Adaptor is built to make your agricultural loader or tractor compatible with attachments from a different brand, giving operators more flexibility from the one machine. It suits farms and mixed-use sites where the loader needs to switch between jobs without being tied to one attachment system. This means you can move from lifting in the shed, loading onto a trailer, or placing materials around the yard with the same machine and a broader range of attachments.

Key features at a glance:

- ▶ Makes ag loaders and tractors compatible with a different brand of attachment, expanding what the machine can take on.
- ▶ Operates from the seat using bucket tilt and lift/lower arm movement.
- ▶ Built to suit most ag loaders and tractors.
- ▶ Operator can connect and disconnect without leaving the machine.
- ▶ Available in rating options from 500kg to 2,500kg.
- ▶ Demountable construction with manual locking pin arrangement for straightforward fitment and use.

WARRANTY

Manufactured from high-quality GR350 steel for long-term durability in demanding working environments.

Engineered as a manual locking pin system, with no hydraulics keeping the connection method mechanically simple and serviceable.

Demountable design supports fitment flexibility while maintaining a robust connection between loader and attachment interface.

39mm thick steel bars provide a strong structural base for carrying load forces through the adaptor body.

Specifications:

Part Number	Fits	Pickup Hitch
UQC.AMCH2131EURO	Challenge 21/31 (Aus Hitch)	Euro
UQC.AMJDQLEURO	John Deere Quick Latch	Euro
