

Bucket Grapple

The Kerfab Bucket Grapple is a heavy-duty attachment built for handling loose, bulky, and irregular materials with control. It combines a loader bucket with a hydraulic grapple to securely grab, contain, and move material. It's suited to clearing debris in the paddock, loading waste or recyclables onto a trailer, and moving loose material around the yard or feed area.

Key features at a glance:

- ▶ Semi-enclosed bucket profile helps contain material and reduce spillage when moving loads.
- ▶ Hardened cutting edge supports digging into compacted material and handling abrasive conditions.
- ▶ Hydraulically operated grapple clamps and holds loose material securely during transport.
- ▶ Available in various widths and capacities.
- ▶ Compatible with wheel loaders.

Grapple arm assembly uses pivot points and bushings to maintain alignment and controlled clamping under load.

Hydraulic system and mounting points are arranged for balanced movement and consistent closing force across the grapple.

High-wear edges with bolt-on options allow for serviceable wear management in abrasive environments.

Reinforced bucket structure and rear stiffening support load distribution across the attachment under heavy material loads.

Specifications:

Part Number	Width mm	Capacity m ³
WGW.IB2115	2100	1.5
WGW.IB2418	2400	1.8
WGW.IB2725	2700	2.5
WGW.IB3035	3000	3.5
