

# Bulk Bag Lifter

The Kerfab Bulk Bag Lifter is a purpose-built attachment for safely lifting and moving bulk bags using a loader. It provides a stable frame with multiple lift points to support bag handling across a range of applications. It's used for lifting fertiliser bags in the paddock, loading bulk bags onto a trailer, and placing materials around the yard or feed area. The adjustable design allows operators to handle different bag sizes with confidence and control.

## Key features at a glance:

- ▶ Four lifting points provide stable support when lifting and moving bulk bags.
- ▶ Adjustable lifting positions allow handling of different bag sizes, including 70cm and 100cm bags.
- ▶ Compatible with ag loaders and telehandlers.
- ▶ Simple frame design allows quick engagement and placement of bulk bags in working areas.
- ▶ Available in standard and heavy-duty models to suit different load requirements.

Four-point lifting layout distributes load evenly to maintain balance and reduce bag swing during handling.

Adjustable beam configuration allows alignment with different bag loop spacings while maintaining structural integrity.

Designed for predictable handling under load with stable positioning during lift and placement.

Rigid frame construction supports consistent load transfer from lifting points through the attachment.

## Specifications:

| Part Number | Capacity kg | Width mm | Machine Compatibility |
|-------------|-------------|----------|-----------------------|
| UJI.BB1110  | 1000        | 1100     | Tractor/Ag Loader     |
| UJI.BB1120  | 2000        | 1100     | Tractor/Ag Loader     |
| TJI.BB1110  | 1000        | 1100     | Telehandler           |
| TJI.BB1120  | 2000        | 1100     | Telehandler           |
