

Concrete Mixer Bucket

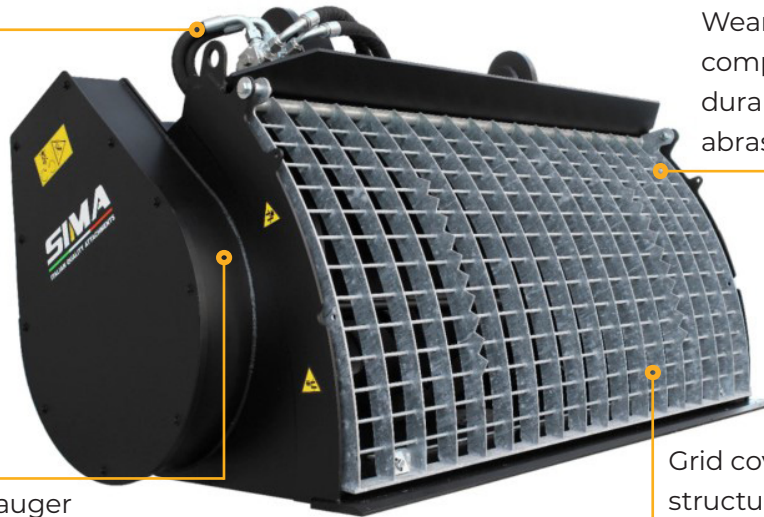

The Kerfab Concrete Mixer Bucket is a specialised attachment that allows operators to load, mix, transport, and pour concrete directly from their machine. It integrates mixing and delivery into a single unit, reducing the need for separate equipment on site. It's suited to pouring footings around sheds, placing concrete in fence lines across the paddock, and working in tight access areas where trucks can't reach.

Key features at a glance:

- ▶ Integrated mixing and delivery allows loading, blending, and pouring from one attachment.
- ▶ Hardox 500 mixing propellers provide consistent mixing action in abrasive concrete materials.
- ▶ Built-in bag opener spikes on the grid simplify loading of cement bags.
- ▶ Operates using a single hydraulic circuit for simple integration.

STANDARD
WARRANTY

Hydraulic drive system is arranged to provide controlled mixing speed and discharge response.

Wear-resistant internal components support durability when handling abrasive aggregates.

Enclosed drum and auger system is engineered to maintain consistent material flow during mixing and discharge.

Grid cover and frame structure support safe loading while protecting internal mixing components.
