

# Pallet Fork Log Grab

The Pallet Fork Log Grab is a highly versatile attachment designed for efficient handling of logs, pipes, and poles. Optimally curved grappling arms guide materials smoothly along the inner surface of the beak, allowing loads to roll into position with minimal effort. This unique design consistently forms neat, rounded bundles, even when handling irregularly shaped materials.

## Key features at a glance:

- ▶ Dual and single beak designs.
- ▶ Beak can be removed, transforming it into a standard pallet fork.
- ▶ Open back frame allows clear vision of load during lifting.
- ▶ Comes standard with 1220mm long tines. Other lengths available if required.
- ▶ Compatible with ag loaders, wheel loaders and telehandlers.

High strength ITA tines can be easily adjusted and securely locked into place across multiple latching points on the carriage.

Beak is manufactured from GR350 steel for guaranteed longevity.

Dual beak is ideal for lifting and transporting multiple heavy logs, pipes, or poles.
