

Skid Steer Light Materials Bucket

The Skid Steer Light Materials Bucket is a large-capacity bucket built specifically for skid steers to handle light materials quickly and cleanly. It is suited to materials with a density under 800 kg/m³ and is available in a range of widths and capacities to match different site needs. It gives operators a practical way to load loose material onto a trailer, move bulk material around the yard, and clean up or stockpile in the shed or feed area.

Key features at a glance:

- ▶ Large-capacity bucket profile helps move more material in each pass.
- ▶ Made specifically for skid steers for straightforward machine matching and on-site use.
- ▶ Quick hitch compatible for fast attachment changes during daily work.
- ▶ Available in widths from 1800 mm to 2500 mm, with capacities from 0.8 m³ to 2.0 m³.
- ▶ Custom solutions are available where operators need a bucket matched to specific tasks or machine setups.

Hardened wear edge supports digging contact areas and helps manage edge wear over time.

Broad bucket geometry is engineered for stable handling of lighter, higher-volume material loads across site transport tasks.

Optional bolt-on double bevel wear edge provides a serviceable wear surface for applications needing added edge life.

Robust bucket construction is intended to handle repeated use in harsh working conditions.

Specifications:

Part Number	Width mm	Capacity m ³
SBU.LM1806	1800	0.6
SBU.LM2010	2000	1
SBU.LM2215	2200	1.5
SBU.LM2520	2500	2
