

Cotton Module Fork

Having complete control of your cotton while handling it is crucial to avoiding damage and wastage. A well-engineered and quality-built attachment on the front of your machine will help prevent this. Our Cotton Bale Fork is your ideal solution for transporting, loading and unloading cotton modules safely.

We manufacture the conventional 3 tine design as well as the more beneficial 5 tine style. The 5 tine design results in less stretching and plucking than the 3 tine, while also providing extra stability.

Key features at a glance:

- ▶ Maintains the integrity of the bale while lifting and moving.
- ▶ 3 or 5 tine configurations available.
- ▶ Standard back frame of 1050mm high.
- ▶ Tines are designed to smoothly glide through the bale, preventing any damage to the wrapping.
- ▶ Requires no hydraulics and contains no moving parts.

2 YEAR
STANDARD
WARRANTY

Open back frame allows clear vision during piercing and lifting.

The top tines and the two outer bottom tines have a thick diameter of 60mm to evenly balance the module weight.

The bottom middle tine is slightly thicker at 75mm for extra strength and durability.

Specifications:

Part Number	Tines	Backframe Height mm	Machine Compatibility
TCF.3T	3	1050	Telehandler
TCF.5T	5	1050	Telehandler
WCF.3T	3	1050	Wheel Loader
WCF.5T	5	1050	Wheel Loader
