

Yard Scraper

The Kerfab Yard Scraper is a heavy-duty attachment designed for clearing liquids, manure, and waste from hard surfaces. It allows operators to push or pull material efficiently across yards, sheds, and feed areas. It's suited to cleaning out sheds, pushing effluent in the yard, and clearing wash-down water or waste from feed areas. The reversible design allows you to change direction easily, keeping control when working in tight or high-traffic spaces.

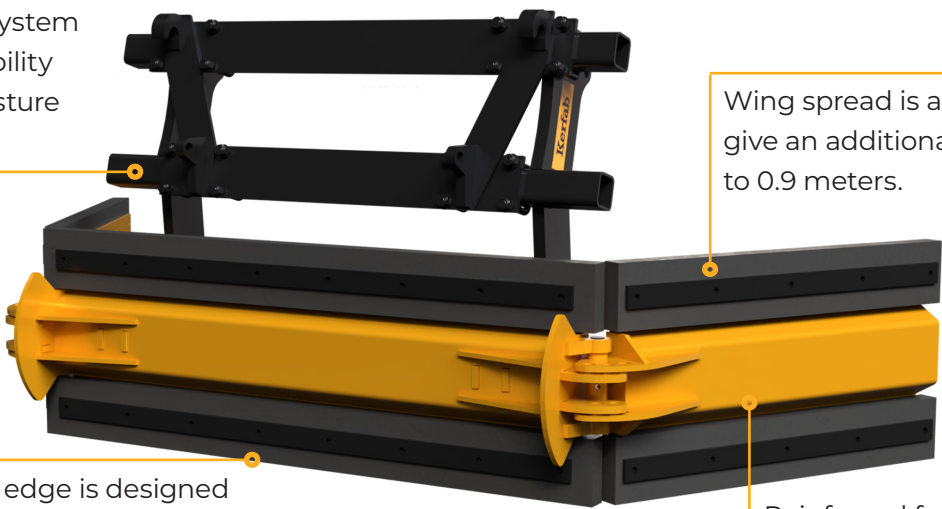

Key features at a glance:

- ▶ Thick rubber blade sweeps liquids and semi-solids across uneven surfaces.
- ▶ Reversible design supports both push and pull operation without changing attachments.
- ▶ Galvanised finish supports durability in wet and corrosive environments.
- ▶ Curved blade profile helps contain and move material across the full working width.
- ▶ Suitable for use with ag loaders and telehandlers in yard and shed applications.

Mounting and blade system are arranged for durability in corrosive, high-moisture environments.

Wing spread is adjustable to give an additional length of up to 0.9 meters.

Rubber cutting edge is designed to flex over uneven surfaces while maintaining scraping pressure.

Reinforced frame supports load transfer during both push and pull operation.

Specifications:

Part Number	Closed Width mm	Open Width mm
TBL.YS27	1800	2700
TBL.YS31	2200	3100
