

WastePro Light Materials Bucket

The WastePro Light Materials Bucket is a high-capacity attachment designed specifically for low-density waste and recycling materials. By reducing bucket weight and maximising internal volume, it allows operators to move larger quantities of lightweight material with each pass. Ideal for loading cardboard into trailers, stockpiling paper in recycling facilities, moving plastic bottles around processing areas, or handling lightweight materials in the yard, this bucket helps maximise carrying volume while maintaining excellent visibility.

Key features at a glance:

- ▶ High-capacity design for low-density materials.
- ▶ Well suited to paper, cardboard, plastic bottles, and similar recyclables.
- ▶ Lightweight construction maximises loader carrying capability.
- ▶ Trash guard helps reduce material spillage behind the bucket.
- ▶ Large profile allows efficient loading and stockpiling of bulky lightweight materials.

2 YEAR
STANDARD
WARRANTY

Reinforced load-bearing areas are designed to manage repetitive loading and transport cycles.

Structural layout supports high-volume handling without unnecessary attachment weight.

Engineered to balance bucket weight and carrying volume for low-density applications.

External wear protection can be incorporated to improve durability in high-wear areas.

Specifications:

The WastePro Light Materials Bucket is available in a range of widths and capacities. Contact our sales team for more details.
