

WastePro Rehandling Bucket

The WastePro Rehandling Bucket is built for high-volume waste and recycling operations where a wide variety of materials are handled every day. Designed for continuous loading, stockpiling, and material movement, it provides the versatility required across modern waste facilities. Whether loading mixed recyclables into trailers, handling crushed glass around a processing site, moving scrap steel in the yard, or transporting organic waste between work areas, the Rehandling Bucket delivers reliable performance across multiple waste streams.

Key features at a glance:

- ▶ Purpose-built for high-volume waste and recycling applications.
- ▶ Suitable for handling multiple material types across a single site.
- ▶ Available with a range of wear and protection options.
- ▶ Supports loading, stockpiling, transfer, and rehandling operations.
- ▶ Configurable to suit different waste streams and operating environments.

2 YEAR
STANDARD
WARRANTY

Multiple cutting edge configurations allow optimisation for specific materials

Optional trash guard protects the hitch area while maintaining visibility.

Internal wear liners help manage abrasion in demanding applications.

Reinforced structure is designed for continuous high-cycle operation.
