Single Wrapped Bale Grab

Single Wrapped Bale Grab

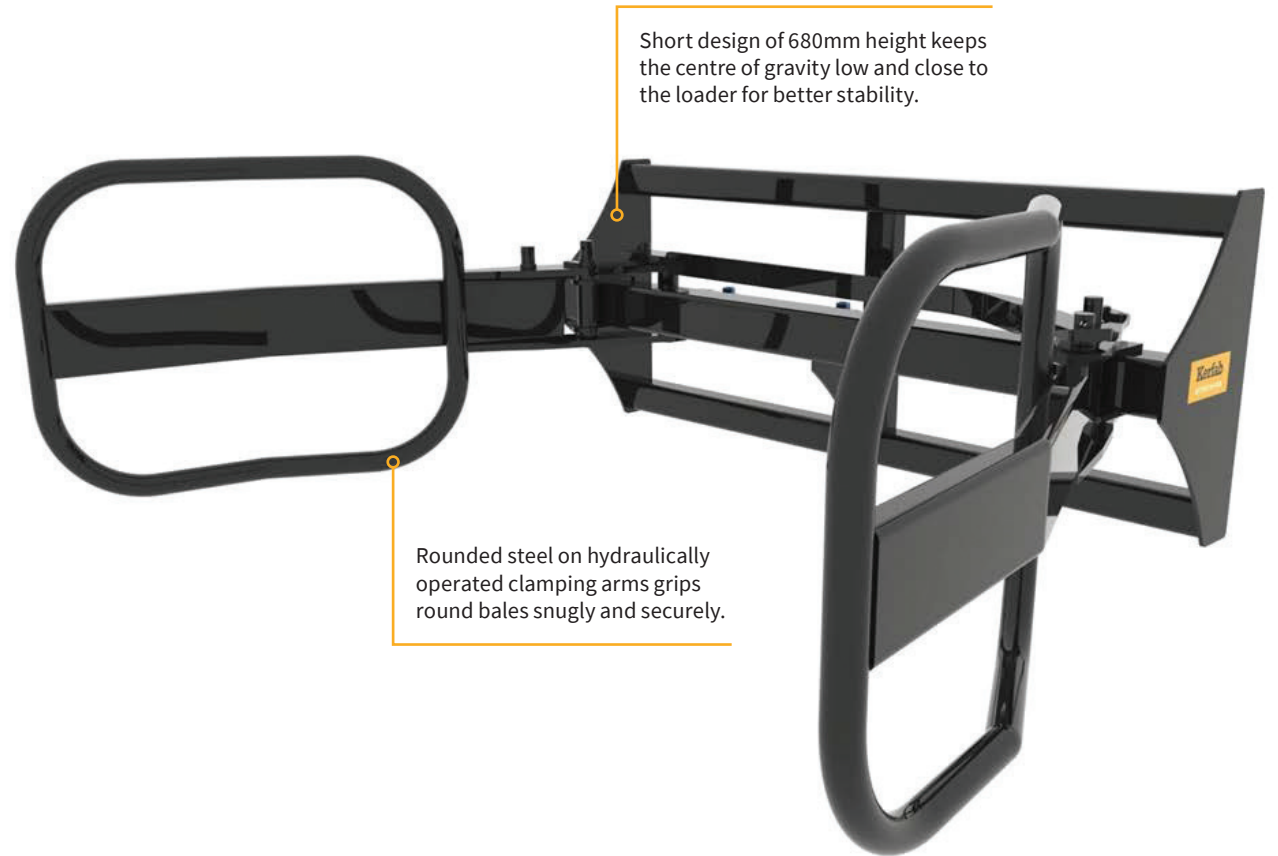

The Single Wrapped Bale Grab is your ideal materials handling solution when transporting wrapped bales. Kerfab's design is built to efficiently and safely handle wrapped bales, while also protecting the wrapping. The protection of the bale was a priority during the design of this attachment.

Rounded steel is used on the clamping arms and the bale is shielded from the mechanism preventing pinching and tearing of the bale wrapping. Bale wrapping is protected from pinches, tears and other damage, as the pressure from the clamps is evenly distributed all around the sides of the bale.

Kerfab's Single Wrapped Bale Grab is available in a range of widths, capacities, and machine sizes. Below is a list of our most popular size. Custom Solutions Available.

Key features at a glance:

- + 2 year manufacturers warranty
- + Customisable to exact specifications
- + Ideal for stacking and organising bales
- + Paddles designed not to damage bales while moving nearby bales
- + A maximum opening size of 2 metres makes the attachment suitable for firmly clamping bales of various diameters
- + Compatible with both telehandlers and ag loaders
- + Quick hitch compatible

Short design of 680mm height keeps the centre of gravity low and close to the loader for better stability.

Rounded steel on hydraulically operated clamping arms grips round bales snugly and securely.

Specifications:

Part Number	Height	Open Dimensions	Closed Dimensions	Weight
SWBG	680mm	2000mm	300mm	230kg
