

Grain Pusher Blade

The Kerfab Grain Pusher Blade is a purpose-built attachment for moving and managing grain in storage environments. It provides a wide blade face to push, shape, and position grain efficiently within sheds. The smooth blade profile allows grain to move cleanly while maintaining control when working in tight shed spaces.

Key features at a glance:

- ▶ Large blade face helps contain and push grain without spilling over the top.
- ▶ Smooth, rounded blade surface allows grain to flow without build-up or trapping.
- ▶ Reversible cutting edge supports durability and ongoing wear management.
- ▶ Optional side wings and extensions improve grain retention and reach when required.
- ▶ Removable side sections allow better manoeuvrability within confined shed areas.

WARRANTY

Curved blade profile is engineered to promote material flow while reducing resistance during operation.

Mounting frame and support arms are arranged to transfer pushing forces back into the machine with stability.

Cutting edge system is designed for replaceability to manage wear in high-contact areas.

Reinforced blade structure with internal stiffening supports even load distribution across the full width during pushing.

Specifications:

Part Number	Width mm	Height mm	Machine Compatibility
TBL.GP22	2200	600	Telehandler
TBL.GP24	2400	600	Telehandler
WBL.GP27	2700	1000	Wheel Loader
WBL.GP30	3000	1000	Wheel Loader
WBL.GP35	3500	1000	Wheel Loader
WBL.GP40	4000	1000	Wheel Loader
