

Grass Fork

The Kerfab Grass Fork is a high-capacity attachment built for handling silage, hay, and other bulky feed materials. It uses a wide tine layout and high back frame to lift, carry, and place large volumes with control. It's suited to loading silage in the pit, stacking feed in the shed, and moving bulk material around the yard or feed area. The open tine design allows clean pickup while maintaining visibility when placing material.

Key features at a glance:

- ▶ Wide tine layout supports lifting and moving large volumes of silage.
- ▶ Heavy-duty mesh backing improves visibility while helping contain material during transport.
- ▶ High back frame reduces material spill toward the machine when carrying loads.
- ▶ Configurable tine numbers and lengths to suit different materials and applications.
- ▶ Suitable for telehandlers and wheel loaders with quick hitch compatibility.

2 YEAR
STANDARD
WARRANTY

High-strength tine mounting system supports repeated penetration and lifting of dense material.

Reinforced frame with multiple cross members is engineered to distribute load across the tine span under heavy silage loads.

Mesh-backed structure balances load retention with operator visibility during handling.

Structural layout maintains alignment of tines under load to support consistent pickup and placement.

Specifications:

Part Number	Width mm	Tines
TBL.GF21	2100	9
TBL.GF24	2400	11
TBL.GF27	2700	12
TBL.GF30	3000	13
