

Extendable Lifting Jib

An Extendable Lifting Jib allows your machine to lift, move, and transport heavy or oversized loads with ease. It's built for handling bulky items that are unsafe to lift manually. The Extendable Lifting Jib increases reach, with a 3-stage option available for lighter loads. Every Kerfab Jib meets Australian Standard 1418.8, ensuring safe and reliable performance.

Key features at a glance:

- ▶ Manual and hydraulic options available.
- ▶ This design offers greater flexibility, allowing you to extend or retract the jib arm to suit the task at hand.
- ▶ Extend up to 3 meters with the largest model.
- ▶ Ideal for lifting materials out of areas that are less accessible with a pallet fork.
- ▶ The 3-stage style further extends your reach but is only recommended when lifting lighter objects.

Important to note:

Kerfab cannot supply a load chart.

When attaching a lifting jib to your loader, Anti-drop or Lock Valves must be fitted to the loader once it is fitted. In some instances, loader management systems and lift charts may be required.
