

# Pallet Fork Rotator

The Pallet Fork Rotator is a versatile and high-performing attachment designed to enhance operations across a range of industries. Designed for lifting and controlled rotation of loads, it enables precise manoeuvring, particularly in confined or restricted work environments. Its ability to rotate tines offers significant advantages in applications that demand speed, safety, and spatial efficiency.

## Key features at a glance:

- ▶ Ideal for handling containers and bins of varying sizes.
- ▶ Fully adjustable tines across the width of the carriage.
- ▶ Provides unmatched flexibility and control.
- ▶ Comes standard with 1220mm long ITA tines.
- ▶ Compactible with ag loaders and telehandlers. Can be fitted with most hitch types.
