THE RANGE

Don't let slow attachment delivery times slow down your sales. Kerfab's 7 Day Lead Times will help keep your sales moving.

Kerfab's ATTACH+GO Range ensures swift access to our most popular Australian-Made attachments in days, not weeks. The entire process from quote through to delivery is designed to be swift.

Kerfab is committed to helping our dealers and their customers get back to doing what they do best faster. We're putting an end to attachments slowing down your sales process.

Our ATTACH+GO guarantee is simple – Australia's best attachments, on their way within 7 days.

OUR PLEDGE

Some restrictions apply:

Turnaround excludes public holidays and the Christmas period. Limit of fewer than three identical items for swift freight. Offer exclusively applicable to standard hitch types. Excludes bulk deals and other hitch types.

HOW TO

ATTACH+GO

Follow these five simple steps and you will have your machinery working at full capacity in no time!

1

FIND IT

Check out the ATTACH+GO range or speak to a Kerfab team member to find the right attachment for you.

2

PRICE IT

Request a quote and receive an official quote in 2 hours.

3

ORDER IT

Confirm the order with all relevant details and let Kerfab handle the rest.

4

GET IT

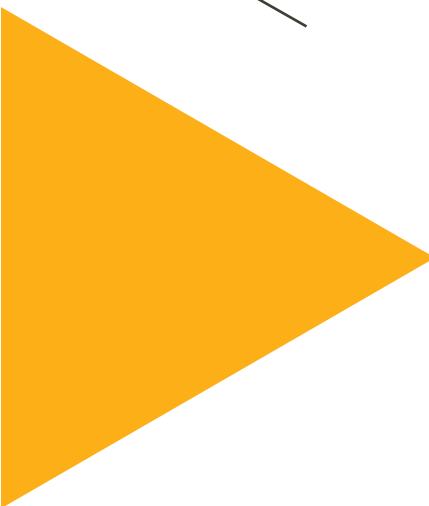

Within 7 days you'll get a dispatch notification with delivery information for your order.

5

ATTACH+GO

Your order will be delivered and ready to ATTACH+GO!

FRONT END LOADERS help turn a tractor into a versatile machine, but attachments are the final piece of the puzzle that allow a tractor to become a multipurpose tool to help farmers lift, shift, scoop, dump, spread, grab, push, or sweep anything.

► **L Series 4 in 1 Bucket**

Get more done with a 4 in 1. Kerfab's 4 in 1 Buckets help farmers get the most from their machine. They can scoop, dump, grab, and push like a dozer blade – a must have on any farm.

[View product >](#)

► **Round Bale Fork**

Kerfab's Round Bale Forks have been engineered with a focus on functionality, ensuring farmers can handle round bales safely and easily. Designed to handle bales by piercing the flat side of a bale or sliding the tines underneath, our forks guarantee stability and reliability.

[View product >](#)

► **ITA Style Pallet Forks**

Essential to safely lift and move pallets around the farm, the ITA Style Pallet Forks can be easily adjusted and then locked in place to stop them sliding around.

[View product >](#)

► **Square Bale Fork**

Kerfab's Tractor Hay Forks are designed to safely handle individual or multiple bales both round and square. The fork frame has been engineered to maximise visibility of the end of the tines and the surrounding areas. Available in 4 or 5 tine configurations. Also compatible with a Telehandler.

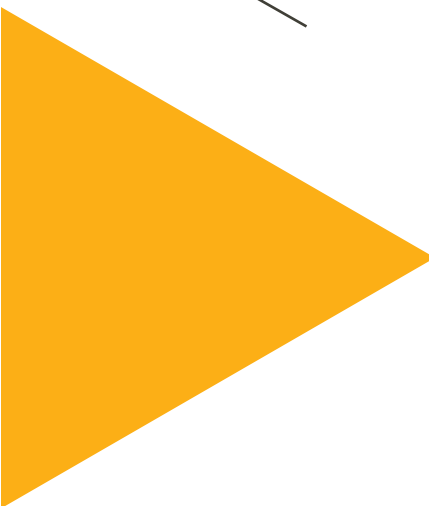

[View product >](#)

► **Large Square Bale Fork**

Kerfab have been working with Aussie farmers for over 30 years to build Australia's best bale forks. These forks can safely lift 3 standard bales and still offer excellent visibility to the end of the bright red, highly visible tines. Available in 4 or 5 tine configurations. Also compatible with a Telehandler.

[View product >](#)

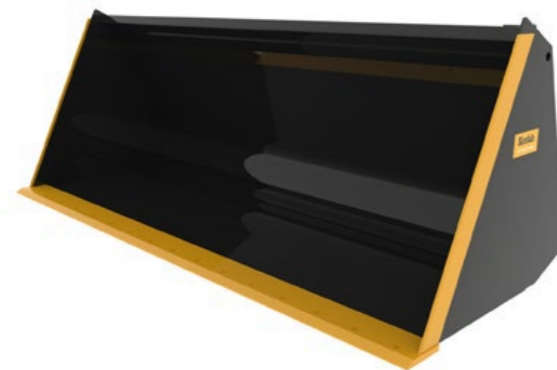

TELEHANDLERS give farmers valuable reach on the farm. The right attachments can help make these machines capable of handling just about anything.

► **Telehandler Rehandling Bucket**

Designed to move large quantities of harsh material a Light Materials bucket can't handle. Ideal for moving sand, gravel, aggregate, and other materials between 1,200kg/m³ and 2,200kg/m³.

[View product >](#)

► **Telehandler GP Bucket**

Like its name suggests, this is a good general purpose bucket. This is the bucket you need when you're regularly handling multiple types of material. It can handle a bit of everything but is less efficient than a Light Materials Bucket for lighter loads.

[View product >](#)

► **Telehandler 4 in 1 Bucket**

The ultimate allrounder. A 4 in 1 can be used like an ordinary bucket, as a clamp, as a dump bucket, as a dozer blade, and to backblade. Less efficient at moving bulk loads of material so not recommended for a machines intended to do a single dedicated task.

[View product >](#)

► **Telehandler Light Materials Bucket**

Designed to move as much material as possible as efficiently as possible, these buckets are deal for moving grain, fertiliser, mulch, and other materials below 800kg/m³.

[View product >](#)

► **ITA Adjustable Pallet Fork**

Essential to safely lift and move pallets around the farm, the ITA Style Pallet Forks can be easily adjusted and then locked in place to stop them sliding around.
