

Wheel Loader Light Materials Bucket

The Wheel Loader Light Materials Bucket is built for handling large volumes of low-density material while making the most of your loader's lifting capacity. Its high-capacity design allows operators to move more material per pass without adding unnecessary bucket weight. Ideal for loading sawdust into trailers, stockpiling compost around the yard, moving mulch in processing areas, or handling grain and other lightweight products.

Key features at a glance:

- ▶ High-capacity design maximises the volume of low-density material moved per load.
- ▶ Available in configurations to suit varying material densities and operating conditions.
- ▶ Large bucket profile allows efficient loading, stockpiling, and transport of bulk materials.
- ▶ Engineered to match loader capacity and application requirements for predictable material handling.
- ▶ Suitable for handling products such as sawdust, mulch, compost, grain, refuse, and other lightweight materials.

STANDARD
WARRANTY

Reinforced load-bearing areas help manage operational stresses during repeated loading and transport cycles.

Material selection and structural design are matched to the intended duty cycle and material characteristics.

Constructed to balance bucket weight and capacity, allowing loaders to carry larger volumes of low-density material.

Configurable wear protection options including cutting edges, side plates, heel plates, and spill guards, increase durability in demanding applications.

Specifications:

Part Number	Width mm	Capacity m ³
WBU.LM2425	2400	2.5
WBU.LM2430	2400	3
WBU.LM2730	2700	3
WBU.LM2740	2700	4
WBU.LM3050	3000	5
WBU.LM3060	3000	6
