

Ag Loader Stick Rake

The Ag Loader Stick Rake is a versatile attachment designed for clearing, gathering, and managing vegetation and debris around the farm. Its open tine design allows operators to collect sticks, roots, and unwanted material while leaving soil behind, making it ideal for land maintenance and paddock preparation. Whether clearing fence lines, preparing areas for mowing or cleaning up around sheds and laneways, the Ag Loader Stick Rake provides an efficient way to move and consolidate material.

Key features at a glance:

- ▶ Open tine design gathers sticks, roots, and vegetation while allowing soil to fall through.
- ▶ Concave rake profile helps retain collected material for efficient clean-up and transport.
- ▶ Available in a range of widths to suit agricultural loader applications.
- ▶ Well suited to paddock maintenance, slashing preparation, vegetation management, and general farm clean-up.
- ▶ Quick hitch compatible for fast attachment changes and convenient operation.

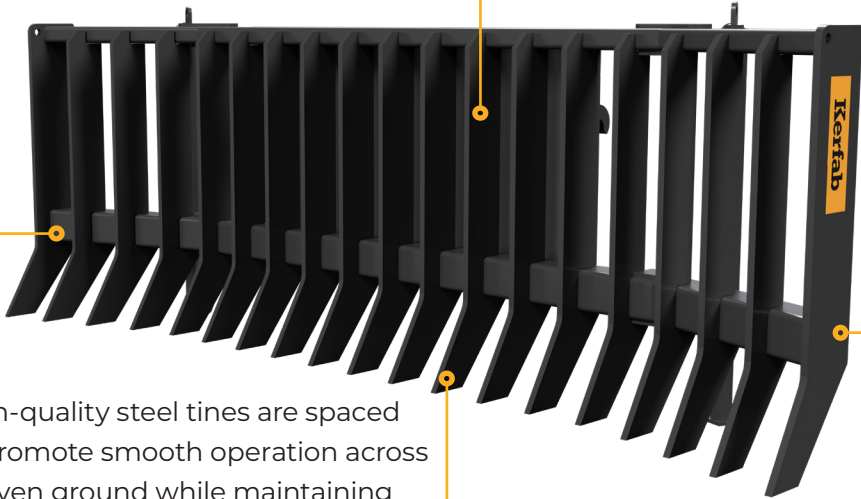

Concave frame geometry is engineered to keep material positioned within the rake during transport.

Optional protective plating ahead of the hitch helps shield hydraulic components and connection points in demanding operating environments.

High-quality steel tines are spaced to promote smooth operation across uneven ground while maintaining debris collection performance.

Optional side wings can be incorporated to improve material retention and increase collection effectiveness.

Specifications:

Part Number	Width mm	Tine Centres mm	Height mm
USR.ST18	1800	150	900
USR.ST21	2100	150	900
USR.ST24	2400	150	900
USR.ST27	2700	150	900
