

Heavy Duty Grab

Handling timber, waste, and bulky debris requires a secure grip and the ability to separate usable material from soil or loose fill. The Kerfab Heavy Duty Grab combines a rake-style base with a hydraulically operated grapple, allowing material to be gathered, clamped, and moved in one process. With multiple width and tine configurations available, it supports demanding agricultural and waste handling applications.

Key features at a glance:

- ▶ Rake, grab, and transport material with greater control.
- ▶ Available in widths from 2100 mm to 2700 mm.
- ▶ Different tine configurations allow the grab to suit timber, waste, or mixed debris.
- ▶ Well-spaced tines allow soil and fine material to fall through while retaining larger debris
- ▶ Compatible with telehandlers and wheel loaders.

The curved grapple shape improves contact with uneven loads. This helps maintain grip during lifting.

Reinforced frame structure is designed to manage raking and lifting loads. This supports durability under heavy use.

The grapple arm applies consistent clamping force across the load. This supports controlled handling of irregular material.

Specifications:

Part Number	Width mm	Number of Tines
TGT.HT21	2100	8
TGT.HT24	2400	9
TGT.HT27	2700	10
