

Heavy Duty Scrub Grapple

The Kerfab Heavy Duty Scrub Grapple is built for handling dense, heavy, and abrasive materials where standard grapples may struggle. It is designed to grab, lift, and move large volumes of green waste, timber, and compact material with confidence. It's suited to clearing heavy regrowth in the paddock, loading timber or bulky waste onto a trailer, and handling mixed material in the yard or waste area.

Key features at a glance:

- ▶ Abrasion-resistant tine tips support work in high-wear environments and extend service life.
- ▶ Semi-open tine layout allows material to be grabbed while shedding dirt and loose debris.
- ▶ Heavy-duty tines dig through packed materials.
- ▶ Designed for large volume handling across agriculture and waste management applications.
- ▶ Available in multiple widths and capacities to suit larger machines and heavier workloads.
- ▶ Compatible with wheel loaders.

WARRANTY

Reinforced beak structure with cover plating supports load distribution and protects high-wear zones.

Heavy-duty pivot system is engineered to manage higher load forces during clamping and lifting.

Integrated cross bars through the tine structure maintain spacing and alignment under heavy material loads.

High-strength GR350 steel tines provide structural rigidity under impact and sustained load pressure.

Specifications:

Part Number	Width mm	Capacity m ³
WGT.HS21	2100	1.75
WGT.HS24	2400	2
WGT.HS27	2700	2.2
WGT.HS30	3000	2.45
