

Heavy Duty Silage Buck Rake

Built for efficient silage pit operations, the Kerfab Heavy Duty Silage Buck Rake features a high-capacity tine layout paired with a hydraulic push-off system for even material layering and compaction in a single pass. Side tines enhance load retention during transport, while the mesh backing preserves operator visibility and helps keep material contained. A silage buck rake allows operators to carry, place, and compact silage in one continuous workflow.

Key features at a glance:

- ▶ Carrying, placing, and compacting can be completed in one process, increasing onsite efficiency.
- ▶ The push-off system allows controlled release, creating even layers across the pit.
- ▶ High-capacity tine layout for large volume handling.
- ▶ Available in widths from 2700 mm to 3000 mm, including high-capacity configurations to suit larger operations.
- ▶ Compatible with most ag loader and telehandler makes and models.

A mesh backing supports both load containment and operator visibility, enabling greater control during placement.

Hardox steel tine layout is designed to support high-capacity loads.

Hydraulic push-off allows you to slowly and steadily layer the silage onto the pit, release, and then compact to ensure the silage is ensiled neatly, with the one attachment.

Side tines help contain material during movement improving load retention while carrying silage.

Specifications:

Part Number	Width mm	Bottom Tines	Capacity m ³
B890PPHX	2740	11	5.09
B810PPHX	3000	12	5.66
