

Pit Silage Grab

The Kerfab Pit Silage Grab is designed for handling silage and bales with smaller loaders and telehandlers, giving operators controlled pickup and secure clamping in tighter working areas. It allows you to cut into the pit, lift cleanly, and place material with confidence. It's suited to loading silage into feed-out carts, cleaning up around the pit, and handling round or square bales in the yard or shed. The open design supports clear visibility when placing feed or working close to walls and stacks.

Key features at a glance:

- ▶ High-capacity hydraulic cylinders clamp silage securely during lifting.
- ▶ Tine spacing is arranged to reduce silage loss when carrying and placing material.
- ▶ Designed for ag loaders and smaller telehandlers across a range of sizes.
- ▶ Bright red tines improve visibility when entering the pit or aligning loads.
- ▶ Variable tine configurations allow setup to suit different materials and jobs.

STANDARD
WARRANTY

Pivot points and bushings are arranged for durability under frequent grab cycles.

Dual cylinder configuration is engineered to maintain even clamping across the grab width.

Reinforced frame and tine rail structure supports load distribution during lifting and transport.

Tine mounting system is designed for repeated penetration into compacted silage.

Specifications:

Part Number	Width mm	Bottom Tines	Top Tines
UGS.PS18	1800	8	6
UGS.PS21	2100	9	7
UGS.PS24	2400	11	8
