

Skid Steer Root Grapple

The Skid Steer Root Grapple combines a rake-style base with dual independent grapple arms, built to sift, grab and carry hard-to-handle material. It allows the operator to separate debris while holding onto larger loads. In the paddock, it can pull out roots and shrubs while leaving soil behind. In the yard, it gathers logs and waste into manageable piles. When loading onto a trailer, it grips irregular material and places it with control.

Key features at a glance:

- ▶ Rake-style base sifts soil while retaining larger material.
- ▶ Twin cylinder, dual independent grapple arms hold uneven loads securely.
- ▶ Tooth-like tines dig through dense and abrasive material.
- ▶ Handles logs, rocks, shrubs and general waste.
- ▶ Quick hitch compatible for easy machine integration.
- ▶ Compatible with most skid steer makes and models.

WARRANTY

Hydraulic system delivers controlled clamping across irregular shapes.

Independent grapple arms manage uneven load distribution across the width.

Reinforced tine layout handles penetration into dense material.

Open tine structure allows material separation while maintaining load support.

Specifications:

Part Number	Width mm	Weight kg
SSRG15	1575	318
SSRG16	1675	328
SSRG17	1725	334
SSRG18	1830	338
SSRG19	1980	354
SSRG21	2135	363
