

Telehandler Log Grab

The Kerfab Telehandler Log Grab is a compact and adaptable attachment designed for handling logs and poles across a wide range of diameters. It allows operators to grab, lift, and place timber accurately in tight working environments. It's suited to moving logs around the yard, loading poles onto a trailer, and placing timber in stacks or processing areas. The design allows controlled handling of both small and larger diameter logs with the same attachment.

Key features at a glance:

- ▶ Designed to handle logs and poles across a wide diameter range.
- ▶ Single beak design as standard, with dual beak options available for different applications.
- ▶ Quick hitch compatibility for fast attachment changeover.
- ▶ Compact width supports use in tighter working areas and around stacked material.
- ▶ Customisable build options to suit machine size and application needs.

Hydraulic system layout supports controlled grab response for precise placement and handling.

Pivot and bush arrangement supports smooth movement and durability under repeated clamping cycles.

Beak and tine structure is engineered to maintain grip across varying log diameters without shifting.

Frame and mounting structure are arranged to transfer load forces efficiently into the telehandler.

Specifications:

Part Number	Width mm	Min Diameter mm	Max Diameter mm
