

WastePro 4 in 1 Bucket

The WastePro 4-in-1 Bucket is a versatile attachment that combines multiple functions into a single tool, making it well suited to waste transfer stations and recycling facilities where material types can vary throughout the day. It can be used for loading, clamping, pushing, levelling, and controlled discharge from the centre of the bucket. Whether loading mixed recyclables into a trailer, grabbing bulky waste in the yard, pushing loose material into piles, or levelling work areas around a transfer station, the 4-in-1 Bucket provides flexibility without changing attachments.

Key features at a glance:

- ▶ Combines bucket, grab, blade, levelling, and centre-dump functions in one attachment.
- ▶ Handles both loose materials and bulky waste items.
- ▶ Allows controlled discharge without fully tipping the bucket.
- ▶ Suitable for co-mingled waste, recyclables, cardboard, and oversized materials.
- ▶ Reduces the need for multiple attachments across varied waste handling tasks.
